PAN-Ru1 Tensidic-blocked (Phosphorescent Nanoparticles)

Catalog No: 15812, 16812

Lot No: Not Available

Chemical Properties:

Contents: 5 ml (Cat # 15812) or 10 ml (Cat # 16812) aqueous suspension of PAN-Tensidic blocked, 0.5 % (w/w) in 10 mM MOPS + 0.5 % (w/w) Tween, pH 7, 15 mM sodium azide

Fluorescent Properties:

PAN-Particles are based on a novel polymer, which form lattices with reduced oxygen permeability and result in a very good protection of the incorporated dye against other environmental effects. The combination of these new polymers with the Ruthenium-complexes result in novel nanoparticles with high fluorescent intensities.

The particles are about 50 nm. The surface is carboxy-modified, has additional sulfo-groups and is blocked with Tween.

PAN-Nanoparticles are “loaded” with the Ru-1 dye, showing a large Stoke's shift of 145 nm. The excellent shielding of the dye against quenchers like oxygen leads to particles with well defined luminescent decay times:

Excitation max: 470 nm

Emission max: 615 nm

Decay-time t: 5.3 μ s (air saturated) 5.9 μ s (oxygen free)

Delivery-Form: 0.5 % (w/w) in buffer

Quality Control:

The particles have been quality tested by spectro-photometrical evaluation and by determining the solid residue after lyophilization.

Storage:

To ensure stability, the aqueous suspension should be stored at 4°C in the dark.

Caution: Do not dry or freeze; do not use more than 5% organic solvent. This product is guaranteed for 12 months from the date of arrival.
